

Science Laboratory upgrade

Medway Campus, University of Greenwich, London

Highlights

Axis undertook extensive refurbishment works to the Nelson Science Laboratory and surrounding rooms at the University of Greenwich's Medway Campus.

The scope of works included: internal redecorations, floor renewal, installation of a new suspended ceiling and the removal and renewal of the existing fume cupboards and disused piping. The project also included fitting classroom shelving and carrying out minor electrical adaptations with relevant NICEIC Certificates issued.

All works were all carried out within a Specialist Specification during the academic term: therefore the project required sensitivity to the environment and careful observation of hours of working. All surrounding rooms within the busy university building were occupied by staff and students, but with professionalism, careful planning and programming we were able to complete the work with minimal disruption.

Specifications

- Refurbishment and upgrade
- New fume cupboard installations
- New suspended ceilings
