

IT data suite removal

Financial Institution, Canary Wharf, London

Highlights

Axis were contracted to remove a redundant IT data suite from a financial institution in Canary Wharf to create 60 new desk positions. We were awarded the role of Principal Contractor and to ease disruption and ensure business could continue as normal, we operated on a 24-hour basis to condense the project to a 12 week programme. We conducted any intrusive, noisy or disruptive works outside of normal working hours.

The scope of works included installing a new ceiling and raised floor to match the existing system present in the rest of the building, following the removal of the IT data suite. Decorative works such as painting and new flooring completed the project.

Specifications
